Technical Tips

Klean Kut

The differences between 'Klean Kut' products are:

- Standard 8 Tooth Klean Kut is a non edge hardened product made from alloy. We can make it out of regular carbon steel, but when we do, we recommend edge hardening.
- 13 Tooth Klean Kut is made from regular carbon steel and is always edge hardened. We can make it from alloy, but even if we did, we still edge harden it.
- 10 Tooth Klean Kut is made from regular carbon steel and is not edge hardened. We sell very little 10 Tooth Klean Kut.
